Individual Project

An Online Application System for the University of Botswana

University of Botswana   Department of Computer Science

Design and build a simple web application for the University of Botswana, using (X)HTML, PHP, CSS, JavaScript and MySQL.

At a minimum, your application should support the following functions:

- Application for admission to the Botswana.
- Uploading of certificates and identity documents during the application process.
- Prospective students should not be able to change their academic qualifications after submitting the application. However, they should be able to change any other personal information (logged in).
- Managing applications and details by an administrator (logged in).
- University of Botswana admission staff should be able to automatically generate a ranking of prospective students based on their BGCSE points (in descending order) to assist them in their selection of students (Use Bsc General as a test case).

Deliverables:

You will not be required to submit anything as your work will be marked in place on the live server. You should therefore make sure that your system is ready by the dates indicated below.

Marking Criteria:

Your project will be marked mainly on the basis of:

- The functionality of the system.
- The quality of the interface.
- The quality of your code.

Due date:

30 – April – 2024
